wherein the transport processor generates a control signal to control processing of a packet by the input module based on associated control information retrieved from the memory;

wherein the input module passes a data payload to the transport controller in response to the control signal.

Claim 44

A receiver for processing a packetized digital data stream, the receiver comprising: an input module to receive and process a data packet; a memory; a receiver processor to control storage of desired packet identifiers and associated control information in the memory; and a
